Ubuntu Installation

Installation Requirements

Updates

Install Software in Ubuntu

Welcome to the **Introduction to Linux** Practice Lab. In this module, you will be provided with the instructions and devices needed to develop your hands-on skills.

Learning Outcomes

In this module, you will complete the following exercises:

- Exercise 1 - Review the System Requirements for an Ubuntu Installation
- Exercise 2 - Install Ubuntu using Installer Media
- Exercise 3 - Complete the Post-installation of Ubuntu with Additional Software and Updates

After completing this module, you should be able to:

- Identify System Installation Requirements
- Determine System Requirements
- Obtain Ubuntu Desktop Installation Files and Perform the Installation

- Prepare Ubuntu for User

Exam Objectives

The following exam objectives are covered in this module:

1.6 Given a scenario, build and install software

- Package management
- System updates

Lab Duration

It will take approximately **1 hour** to complete this lab.

Help and Support

For more information on using Practice Labs, please see our **Help and Support** page. You can also raise a technical support ticket from this page.

Click **Next** to view the Lab topology used in this module.

Lab Topology

During your session, you will have access to the following lab configuration.

Depending on the exercises, you may or may not use all of the devices, but they are shown here in the layout to get an overall understanding of the topology of the lab.

- **PLABSRV01** - Ubuntu 20.04 - Stand-Alone Ubuntu Server (Console)
- **PLABSRV02** - Alma Linux 8.5 - Stand-Alone Linux Server (GUI)
- **PLABCLIENT01** - Ubuntu 20.04 - Stand-Alone Ubuntu Workstation (GUI)
- **PLABWIN10** - Windows 10 - Stand-Alone Workstation

Click **Next** to proceed to the first exercise.

Exercise 1 - Review the System Requirements for an Ubuntu Installation

In this exercise, you will determine whether or not the device has met the system requirements to install a Linux distro. You will browse to the Ubuntu website and determine the system requirement for an installation, and then verify that the device has met those requirements.

Learning Outcomes

After completing this exercise, you should be able to:

- Identify System Installation Requirements
- Determine System Requirements

Your Devices

You will be using the following device in this lab. Please power this on now.

- **PLABWIN10** - Windows 10 - Stand-Alone Workstation

Task 1 - Identify System Installation Requirements

In this task, you will identify the system requirements for an Ubuntu installation and determine if the device will meet the requirements for an Ubuntu installation.

Step 1

Connect to **PLABWIN10**.

Click the **Microsoft Edge** icon on the **Taskbar**.

Figure 1.1 Screenshot of PLABWIN10: Microsoft Edge icon on the Windows Taskbar is selected.

Step 2

In the **Microsoft Edge** browser window, type the following in the address bar:

```
https://help.ubuntu.com/community/Installation/SystemRequirements
```

Press **Enter**.

Figure 1.2 Screenshot of PLABWIN10: Microsoft Edge browser window is displayed, showing the required URL entered in the address bar.

Step 3

In the **Ubuntu documentation - Installation/SystemRequirements** page, review the **Recommended Minimum System Requirements** and the **Ubuntu Desktop Edition** sections.

You will be installing the **Ubuntu Desktop Edition**.

Figure 1.3 Screenshot of PLABWIN10: Microsoft Edge browser window is displayed, showing the Ubuntu documentation - Installation/SystemRequirements webpage.

Minimize the **Microsoft Edge** browser window.

Task 2 - Verify the System Requirements

In this task, you will verify whether the device meets the requirements for an Ubuntu installation.

Step 1

Ensure you are connected to **PLABWIN10**.

Click the **Hyper-V Manager** icon on the **Taskbar**.

Figure 1.4 Screenshot of PLABWIN10: Hyper-V Manager icon on the Windows Taskbar is selected.

Step 2

In the **Hyper-V Manager** window, select and right-click on **PLABCLIENT02** in the **Virtual Machines** pane and select **Settings**.

Figure 1.5 Screenshot of PLABWIN10: Hyper-V Manager window is displayed, showing PLABCLIENT02 right-clicked and Settings selected from the context menu.

Step 3

In the **Settings for PLABCLIENT02 on PLABWIN10** window, view the system specifications available.

Figure 1.6 Screenshot of PLABWIN10: The Settings for PLABCLIENT02 on PLABWIN10 window is displayed.

Note: Notice the virtual machine has a **Memory** of only **512 MB**. Restore the **Microsoft Edge** browser window to view the minimum memory required. **4GiB RAM** is required to install the **Ubuntu Desktop Edition**. Hence, this device does not meet the minimum system requirements.

Step 4

In the **Settings for PLABCLIENT02 on PLABWIN10** window, click **OK**.

Figure 1.7 Screenshot of PLABWIN10: The Settings for PLABCLIENT02 on PLABWIN10 window is displayed, showing the OK button selected.

Step 5

Back on the **Hyper-V Manager** window, select and right-click on **PLABCLIENT03** in the **Virtual Machines** pane and select **Settings**.

Figure 1.8 Screenshot of PLABWIN10: Hyper-V Manager window is displayed, showing PLABCLIENT03 right-clicked and Settings selected from the context menu.

Step 6

In the **Settings for PLABCLIENT03 on PLABWIN10** window, view the system specifications available.

Figure 1.9 Screenshot of PLABWIN10: The Settings for PLABCLIENT03 on PLABWIN10 window is displayed, showing the OK button selected.

Note: Notice the system has a **Memory of 6144MB**, which is **6 GB**. This device meets the system requirements to perform an Ubuntu Desktop Edition installation.

Keep the **Settings for PLABCLIENT03 on PLABWIN10** window open.

Exercise 2 - Install Ubuntu using Installer Media

Note: When connecting to the nested virtual device, the mouse cursor might become distorted with a black box. This will not affect the completion of the exercise.

In this exercise, you will browse to the Ubuntu website and find the download version appropriate for the installation. You will then prepare the media and system for the installation

process and perform an Ubuntu installation.

Learning Outcomes

After completing this exercise, you should be able to:

- Obtain Ubuntu Desktop Installation Files and Perform the Installation

Your Devices

You will be using the following device in this lab. Please power this on now.

- **PLABWIN10** - Windows 10 - Stand-Alone Workstation

Task 1 - Obtain Ubuntu Desktop Installation Files and Perform Installation

In this task, you will browse to the Ubuntu website and verify the download files appropriate for the installation. You will then install the Ubuntu desktop version.

Step 1

Ensure you are connected to **PLABWIN10**.

Restore the **Microsoft Edge** browser window from the **Taskbar**.

Figure 2.1 Screenshot of PLABWIN10: Microsoft Edge icon on the Windows Taskbar is selected.

Step 2

In the **Microsoft Edge** browser window, type the following in the address bar:

<https://ubuntu.com/download/desktop>

Press **Enter**.

Click **Accept and visit site** on the pop-up window.

Figure 2.2 Screenshot of PLABWIN10: Microsoft Edge browser window is displayed, showing the required URL entered in the address bar.

Step 3

Notice the 2 **Ubuntu Desktop** version that is available:

- **24.04.1 LTS**

Close the **Microsoft Edge** browser window.

Figure 2.3 Screenshot of PLABWIN10: Microsoft Edge browser window is displayed, showing the Ubuntu download webpage. Close icon on the top-right corner of the window is selected.

Note: The screenshots of the website may vary as it is dynamically updated. The installation media was already downloaded and attached to the virtual machine, so no further action is required.

You will install the **Ubuntu 22.04 Desktop** version in this task.

Step 4

In the **Settings for PLABCLIENT03 on PLABWIN10** window, notice the **Ubuntu 22.04** installation file has already been downloaded for you under the **DVD Drive** section.

Click **OK**.

Figure 2.4 Screenshot of PLABWIN10: The Settings for PLABCLIENT03 on PLABWIN10 window is displayed, showing the OK button selected.

Note: If you downloaded the installation file (.iso) from Ubuntu.com, you might have to prepare the media if the installation were for a true hardware machine. The physical machine would need to boot from a physical media like a DVD or a USB drive. From a Windows device, you would have to “burn” a DVD using DVD burning software, or if the device allowed for USB boot, you would have had to create this using an OS image flash tool like balenaEtcher.

On new hardware that has never had an Operating System installed, it may be set to boot from a DVD or USB before the HDD.

On a repurposed computer, you will access the boot menu for the device and set the boot order to the media of your choice.

Step 5

Back on the **Hyper-V Manager** window, select and right-click on **PLABCLIENT03** in the **Virtual Machines** pane and select **Connect**.

Figure 2.5 Screenshot of PLABWIN10: Hyper-V Manager window is displayed, showing PLABCLIENT03 right-clicked and Connect selected from the context menu.

Step 6

Click **Start** on the **PLABCLIENT03** on **PLABWIN10 - Virtual Machine Connection** window.

Figure 2.6 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 - Virtual Machine Connection window is displayed, showing the Start button selected.

Note: On physical hardware, this would mean that you've prepared the ISO to be a bootable DVD media.

Step 7

Click the **Maximize** icon on the **PLABCLIENT03 on PLABWIN10 - Virtual Machine Connection** window.

Figure 2.7 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 - Virtual Machine Connection window is displayed, showing the Maximize icon selected.

Step 8

In the **PLABCLIENT03 on PLABWIN10** window, select the **Try or Install Ubuntu** option.

Figure 2.8 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 - Virtual Machine Connection window is displayed, showing the Type or Install Ubuntu option selected.

Step 9

The **Ubuntu** initialization process begins.

Figure 2.9 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Hyper-V - Ubuntu initialization process.

The initialization process can take a while to complete.

Step 10

In the **Welcome** screen, select **Install Ubuntu**.

Figure 2.10 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Welcome screen. Install Ubuntu is selected.

Step 11

In the **Keyboard layout** screen, keep the default selection of **English (US)** and click **Continue**.

Figure 2.11 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Keyboard layout screen and Continue selected.

Step 12

In the **Updates and other software** screen, ensure **Normal Installation** is selected.

Click **Continue**.

Note: Under the **Other options** section, **Download updates while installing Ubuntu** and **Install third-party software for graphics and Wi-Fi hardware and additional media formats** should be unchecked.

Figure 2.12 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required option selected and the Continue button highlighted.

Step 13

In the **Installation type** screen, ensure the **Erase disk and install Ubuntu** option is selected.

Click **Install Now**.

Figure 2.13 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required option selected and Install Now highlighted.

Step 14

In the **Write the changes to disks?** pop-up window, click **Continue**.

Figure 2.14 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Continue button on the Write the changes to disks? pop-up window is selected.

Step 15

In the **Where are you?** screen, leave the default locale and click **Continue**.

Figure 2.15 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Where are you? screen. The Continue button is selected.

Step 16

In the **Who are you?** screen, type the following for the corresponding fields:

Your name: pluser01
Your computer's name: PLABCLIENT03
Choose a password: **Passw0rd**
Confirm your password: Passw0rd

Click **Continue**.

Figure 2.16 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Who are you? screen with the required settings performed and the Continue button selected.

Step 17

The Installation process begins.

Figure 2.17 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Install screen.

The installation process can take a while to complete.

Step 18

Once the installation is complete, click **Restart Now** on the **Installation Complete** pop-up window.

Figure 2.18 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Restart Now button on the Installation Complete pop-up window is selected.

Step 19

Press **Enter** on the **Hyper - V - Ubuntu** screen.

Figure 2.19 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Hyper - V - Ubuntu screen.

Exercise 3 - Complete the Post-installation of Ubuntu with Additional Software and Updates

In this exercise, you will manually update the installation of Ubuntu and install a 3rd party application, the Google Chrome Browser.

Note: When connecting to the nested virtual device, the mouse cursor might become distorted with a black box. This will not affect the completion of the exercise.

Learning Outcomes

After completing this exercise, you should be able to:

- Prepare Ubuntu for User

Your Devices

You will be using the following device in this lab. Please power this on now.

- **PLABWIN10** - Windows 10 - Stand-Alone Workstation

Task 1 - Prepare Ubuntu for User

In this task, you will prepare the Ubuntu device for the user.

Step 1

Ensure you are connected to **PLABWIN10**, where the **PLABCLIENT03 on PLABWIN10** Virtual Machine window is open.

Select **pluser01**.

Figure 3.1 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required user selected.

Step 2

Type the following **Password** and press **Enter**:

Passw0rd

Figure 3.2 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required password typed in.

Step 3

In the **Livepatch** window, click **Next**.

Figure 3.3 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing Next selected on the Livepatch window.

Note: Please ensure that the **PLABCLIENT03** window is maximized to be able to see the entire desktop.

Step 4

In the **Help improve Ubuntu** screen, select the **No, don't send system info** option.

Click **Next**.

Figure 3.4 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Help improve Ubuntu screen. The required option is selected, and Next is highlighted.

Step 5

In the **Privacy** screen, click **Next**.

Figure 3.5 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Next is selected on the Privacy screen.

Step 6

In the **You're ready to go!** screen, click **Done**.

Figure 3.6 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Done is selected on the You're ready to go! screen.

Step 7

In the upper right corner of the Ubuntu desktop, select the network icon.

Click on **Wired Connecting** and then select **Wired Settings** from the drop-down menu.

Note: If the network icon doesn't appear in the upper right corner, click the **Show Applications** icon on the left pane and then type **settings** in the **Type to search** textbox. Select **Settings**.

Figure 3.7 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Network menu is accessed, and Wired Connecting > Wired Settings menu options are selected from the drop-down.

Step 8

In the **Settings - Network** pane, click the **Gear** icon under the **Wired** section.

Figure 3.8 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. The gear icon on the Settings - Network pane is selected.

Step 9

In the **Wired** pop-up window, select the **IPv4** tab.

Figure 3.9 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. IPv4 tab on the Wired pop-up window is selected.

Step 10

In the **Wired - IPv4** tab, select the **Manual** option next to the **IPv4 Method** section.

Type the following under the **Addresses** section:

Address: 192.168.0.5
Netmask: 255.255.255.0
Gateway: 192.168.0.250

Figure 3.10 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required Addresses are entered in the Wired - IPv4 tab.

Step 11

Scroll down to the **DNS** section, and move the **Automatic** slider to the left.

Type the following address:

192.168.255.13

Click **Apply**.

Figure 3.11 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required settings is performed in the Wired - IPv4 tab with the Apply button selected.

Step 12

Close the **Settings >> Network** window.

Figure 3.12 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Displaying closing the Settings >> Network window.

Note: The Network icon updated automatically after the IP configuration has been applied.

Step 13

Click on the **Show Applications** icon on the left pane.

Figure 3.13 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Show Applications icon selected.

Step 14

Select the **Terminal** application.

Figure 3.14 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Terminal application selected.

Step 15

In the **Terminal** window, type the following:

```
sudo nano /etc/apt/apt.conf.d/proxy.conf
```

Press **Enter**.

Figure 3.15 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required command is entered in the Terminal window.

Note: The *sudo* option will allow the user to run the command with elevated privileges.

Step 16

Type the following **Password** and press **Enter**:

Passw0rd

Figure 3.16 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required password is entered in the Terminal window.

Note: The password will not be displayed when it's entered.

Step 17

In the **Terminal - GNU nano** window, type the following:

```
Acquire::http::Proxy "http://192.168.255.13:8080/";
```

Press **Enter**.

Next, type the following:

Acquire::https::Proxy "http://192.168.255.13:8080/";

Figure 3.17 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required text is entered in the Terminal - GNU nano window.

Note: If a proxy server is used in a production environment, the **proxy.conf** file needs to be created and edited to apply the specific settings to ensure the device can connect to the internet successfully.

Step 18

Press the **CTRL+O** keys on the keyboard, then press **Enter**.

Next, press the **CTRL+X** keys to exit.

Figure 3.18 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Terminal - GNU nano window.

Step 19

In the **Terminal** window, type the following:

```
sudo apt update
```

Press **Enter**.

Figure 3.19 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required command is entered in the Terminal window.

Note: To update the system, elevated privileges will be required. Hence the **sudo** command is used. The summary of what is available is displayed. The summary shown in the screenshot may vary in size and the number of packages that can be upgraded.

Step 20

The summary of what is available is displayed. The summary shown in the screenshot may vary in size and the number of packages that can be upgraded.

Figure 3.20 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. The output of the command is shown in the Terminal window.

Step 21

In the **Terminal** window, type the following and press **Enter**:

```
sudo apt full-upgrade
```

Figure 3.21 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required command is entered in the Terminal window.

Step 22

Type the following and press **Enter**:

Y

Figure 3.22 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Required command is entered in the Terminal window.

Alert: Due to the large number of updates that need to be downloaded, the download needs to be canceled. This demonstrates how updates will be performed after a new installation of a linux operating system.

To cancel the update process, perform the following steps:

Press **CRTL+C**.

Step 23

If the system logs out during the upgrade process, type the following **Password** in the login screen and press **Enter**:

Passw0rd

Figure 3.23 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required password entered in the login screen.

Step 24

The upgrade is now complete.

Close the **Terminal** window.

Figure 3.24 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. The output of the command is shown in the Terminal window with the Close icon on the top-right corner selected.

Step 25

Click the **Firefox Web Browser** icon on the left pane.

Figure 3.25 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Firefox Web Browser selected on the left pane.

Step 26

In the **Firefox** browser window, type the following in the address bar:

Google Chrome

Press **Enter**.

Figure 3.26 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required search text entered in the Firefox browser address bar.

Step 27

Click **Accept all** in the **Before you continue to Google** pop-up window.

In the browser window, click the **Google Chrome - Download...** link search result.

Figure 3.27 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required search link selected in the Firefox browser window.

Step 28

On the **Google Chrome** page, click the **Download Chrome** button.

Figure 3.28 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Download Chrome button selected.

Step 29

In the **chrome - Get Chrome for Linux** pop-up window, ensure that the **64 bit .deb** option is selected.

Click **Accept and install**.

Figure 3.29 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Accept and install button is selected in the chrome - Get Chrome for Linux pop-up window.

Step 30

Click the **Files** icon on the left pane.

Figure 3.30 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing Files selected on the left pane.

Step 31

In the **Files** dialog box, double-click on the **Downloads** folder.

Figure 3.31 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Downloads folder is selected in the Files window.

Step 32

In the right details pane, right-click on **google-chrome-stable_current_amd64.deb** and select **Open with Other Application**.

Figure 3.32 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. google-chrome-stable_current_amd64.deb file in the Downloads folder is right-clicked, and Open with Other Application is selected.

Step 33

In the **Select Application** dialog box, select **Software Install**.

Click **Select**.

Figure 3.33 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed. Software Install is selected in the Select Application dialog box with the Select button highlighted.

Step 34

In the **google-chrome-stable** window, click **Install**.

Figure 3.34 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing Install selected in the google-chrome-stable window.

Step 35

Enter the following **Password** in the **Authentication Required** window.

Passw0rd

Click **Authenticate**.

Figure 3.35 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required password entered in the Authentication Required window.

Step 36

Once the installation is complete, click the **Show Applications** icon on the left pane.

Figure 3.36 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing Show Applications selected in the left pane.

Step 37

In the **Type to search** textbox, type the following:

google

Select **Google Chrome**.

Figure 3.37 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing google entered in the Type to search textbox and Google Chrome selected.

Step 38

Click **OK** on the **Welcome to Google Chrome** pop-up window.

Figure 3.38 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing OK selected in the Welcome to Google Chrome pop-up window.

Step 39

In the **Google Chrome** address bar, type the following and press **Enter**:

practice-labs.com

Figure 3.39 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required website entered in the address bar in the Google Chrome browser window.

Step 40

You can now browse to the **Practice Labs** website using the **Google Chrome** browser.

Close the **Google Chrome** browser window.

Close all other open windows.

Figure 3.40 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the required website in the Google Chrome browser window.

Step 41

Click the **Close** icon on the **PLABCLIENT03 on PLABWIN10** connection bar.

Figure 3.41 Screenshot of PLABWIN10: PLABCLIENT03 on PLABWIN10 Virtual Machine window is displayed, showing the Close icon on the connection bar selected.

Step 42

Back on the **Hyper-V Manager** window, right-click on **PLABCLIENT03** and select **Shut Down**.

Figure 3.42 Screenshot of PLABWIN10: Hyper-V Manager window is displayed, showing PLABCLIENT03 right-clicked and Shut Down selected.

Step 43

Close the **Hyper-V Manager** window.

Figure 3.43 Screenshot of PLABWIN10: Hyper-V Manager window is displayed, showing the Close icon selected.

Keep all devices that you have powered on in their current state and proceed to the review section.

Review

Well done, you have completed the **Introduction to Linux** Practice Lab.

Summary

You completed the following exercises:

- Exercise 1 - Review the System Requirements for an Ubuntu Installation
- Exercise 2 - Install Ubuntu using Installer Media

- Exercise 3 - Complete the Post-installation of Ubuntu with Additional Software and Updates

You should now be able to:

- Identify System Installation Requirements
- Determine System Requirements
- Obtain Ubuntu Desktop Installation Files and Perform Installation
- Prepare Ubuntu for User

Feedback

Shutdown all virtual machines used in this lab. Alternatively, you can log out of the lab platform.
